

Collaborative Learning via Multi-Touch Interactivity for Healthcare

3FX designs interactive multi-touch experiences and content – in the form of tables &/or walls, for clients within the healthcare marketplace. Our multi-touch platforms encompass application design & development, hardware integration, and dynamic scientific visualization & animation of medical information and processes.

Multi-touch surfaces create intuitive user interfaces, allowing viewers to interact and connect with the intended message - within a "socially collaborative" environment.

Interactive content can be virtually anything- i.e. MOA/MOD animation, device & delivery systems, product branding, KOL video, still imagery, .pdf data, charts & graphs, text, ISI, etc.

ideum Multi-Touch Table Displays

Standard Configurations:

PLATFORM - 55" LED LCD touch table that comes with an integrated solid-state PC, Full HD resolution, and 32+ touchpoints

PRO - 55" LED LCD touch table with a powerful HP tower, Full HD resolution, integrated UPS, and Yamaha audio system.

Options:

CUSTOM COLORS
Available in hundreds of RAL color and finish options. +1-3 weeks additional lead time.
